

# PULSOWIN 4.5

## Software for consulting and managing meteorological data

PULSOWIN is a software for consulting and managing meteorological data:

- View the data from the meteorological database in graph and table format
- Correct aberrant or missing meteorological data
- Monitor meteorological data reliability using indicators
- Export data in different formats (CSV, Excel...)
- Automatic data export to most climate data management systems (CDMS) such as CLIDATA, CLIMSOFT, etc.
- Compare weather data from different weather stations
